Lessons 1&2

Distributive and Associative Property of Multiplication

خاصية التجميع والتوزيع في الضرب

Remember

► **Multiplication is a repeated addition.** عملية الضرب هي عملية جمع متكررة.

Ex. $5 + 5 + 5 + 5 + 5 + 5 = 6 \times 5 = 30$

$6 + 6 + 6 + 6 + 6 = 5 \times 6 = 30$

Multiplication Properties خواص عملية الضرب

Commutative Property
خاصية الإبدال

Associative Property
خاصية التجميع

Distributive Property
خاصية التوزيع

First

Commutative Property:

خاصية الإبدال:

So, $3 \times 5 = 5 \times 3$ (Commutative Property)

1 Complete the following, as in the example:

Ex.

$5 + 5 + 5 + 5 + 5 + 5 = 30$

So,

$5 \times 6 = 30$

and

$6 \times 5 = 30$

a $3 + 3 + 3 + 3 + 3 + 3 =$

So,

$\begin{matrix} \times & = \\ & \\ \times & = \end{matrix}$

and

$\begin{matrix} \times & = \end{matrix}$

b $4 + 4 + 4 + 4 + 4 =$

So,

$\begin{array}{c} \times \\ \hline \end{array} =$

and

$\begin{array}{c} \times \\ \hline \end{array} =$

$\begin{array}{c} \times \\ \hline \end{array} =$

So,

and

$\begin{array}{c} \times \\ \hline \end{array} =$

c $6 + 6 + 6 =$

Second Associative Property:

خاصية التجميع:

Ex. To find $3 \times 5 \times 2$, we can do this in two ways.**First Way**

$$(3 \times 5) \times 2 \\ = 15 \times 2 = 30$$

Second Way

$$3 \times (5 \times 2) \\ = 3 \times 10 = 30$$

**Note:**

- We multiply what's **inside** the **parentheses** first.

نقوم بضرب ما بين القوسين أولاً.

$$\text{So, } (3 \times 5) \times 2 = 3 \times (5 \times 2) \\ \text{(Associative Property)}$$

2 Complete the following:

a $2 \times 5 \times 6$

First Way

$$(\quad \times \quad) \times \quad$$

$$= \quad \times \quad$$

$$= \quad$$

Second Way

$$\quad \times (\quad \times \quad)$$

$$= \quad \times \quad$$

$$= \quad$$

b $3 \times 5 \times 2$

First Way

$$(\quad \times \quad) \times \quad$$

$$= \quad \times \quad$$

$$= \quad$$

Second Way

$$\quad \times (\quad \times \quad)$$

$$= \quad \times \quad$$

$$= \quad$$

© $3 \times 2 \times 10$

First Way

$$\begin{aligned} & (\quad \times \quad) \times \quad \\ & = \quad \times \quad \\ & = \quad \end{aligned}$$

Second Way

$$\begin{aligned} & \quad \times (\quad \times \quad) \\ & = \quad \times \quad \\ & = \quad \end{aligned}$$

Lessons 1 & 2

- 3 Kamal brought home 2 boxes filled with bags of apples. Each box had 3 bags with 5 apples in each. How many total apples did Kamal bring home?

Write an equation and solve it.

Third Distributive Property:

خاصية التوزيع:

Find: 4×9

Array Strategy:

$$\begin{aligned} 4 \times 9 &= 4 \times (6 + 3) \\ &= (4 \times 6) + (4 \times 3) \\ &= 24 + 12 = 36 \end{aligned}$$

إستراتيجية المصفوفة:

Bar Model Strategy:

إستراتيجية نموذج شريط الأعداد:

$$\begin{aligned} 4 \times 9 &= 4 \times (4 + 5) \\ &= (4 \times 4) + (4 \times 5) \\ &= 16 + 20 = 36 \end{aligned}$$

- 4 Use the **Distributive Property of Multiplication** to find the product of each of the following using the **bar model strategy** in two different ways.

Second Way

$$\begin{aligned} 8 \times 5 &= 8 \times (4 + 1) \\ &= (8 \times 4) + (8 \times 1) \\ &= 32 + 8 = 40 \end{aligned}$$

Second Way

Second Way

Estimating Multiplication

تقدير ناتج الضرب

التقدير Estimation

It is a way to get a result close to the actual result.

هو طريقة للحصول على ناتج قريب من الناتج الفعلي

إستراتيجية حقائق الضرب المجاورة

Ex. Estimate the product of 5×8 .

It can be estimated in one of the following ways:

First Way

Subtract 1 from 5 $\rightarrow 4 \times 8 = 32$ Add 1 to 5 $\rightarrow 6 \times 8 = 48$ Actual Product $\rightarrow 5 \times 8 = 40$ The actual product of 5×8 is 40, and it lies between 32 and 48

$$32 < 40 < 48$$

In all of the above, we get a good estimate because all previous estimates are close to the actual product.

في كل مما سبق نحصل على تقدير جيد؛ لأن التقديرات السابقة قريبة من الناتج الفعلي.

Ex. Estimate the product of 3×9 . $2 \times 9 = 18$ and $4 \times 9 = 36$ The actual product of 3×9 is 27So The actual product of 3×9 lies between 18 and 36.Subtract 1 from 8 $\rightarrow 5 \times 7 = 35$ Add 1 to 8 $\rightarrow 5 \times 9 = 45$ Actual Product $\rightarrow 5 \times 8 = 40$ The actual product of 5×8 is 40, and it lies between 35 and 45.

$$35 < 40 < 45$$

 $3 \times 8 = 24$ and $3 \times 10 = 30$ The actual product of 3×9 is 27.So The actual product of 3×9 lies between 24 and 30.

- 1 Estimate each of the following using the **neighboring multiplication facts strategy**, then find the actual product:

	Problem	Estimate/ The actual product lies between				Actual Product
a	6×8	\times	$=$	and	\times	$=$
b	5×7	\times	$=$	and	\times	$=$
c	6×9	\times	$=$	and	\times	$=$
d	8×4	\times	$=$	and	\times	$=$
e	3×6	\times	$=$	and	\times	$=$

Ex. Estimate the product of 4×18 .

Front-End Estimation Strategy:

4×18 استراتيجية التقدير من
 خلال أول رقم من اساس

$$4 \times 10 = 40$$

4×18 إستراتيجية التقريب
 لأقرب 10

$$4 \times 20 = 80$$

Actual Product:

$$4 \times 18 = 4 \times (10 + 8) = (4 \times 10) + (4 \times 8) = 40 + 32 = 72$$

النتيجة الفعلية

- By comparing the estimation results with the actual result, we find that:
 - 40 is not an acceptable estimate because it is not close to the actual product.
 - 80 is an acceptable estimate because it is close to the actual product

• (40) تقدير غير مقبول لأنه بعيد عن الناتج الفعلي.
 • (80) تقدير جيد (مقبول) لأنه قريب من الناتج الفعلي.

- 2 Estimate the product, then solve each problem using any strategy or property that helps you:

c 6×19			$6 \times 19 = \quad \times (\quad + \quad)$ $= \quad + \quad =$

Ex. Estimate the product of $3 \times 4 \times 2$.

- To get the closest estimate to the actual product of three numbers:

للحصول على أقرب تقدير للمنتج الفعلي لحاصل ضرب ثلاثة أعداد:

- 1 Multiply the two larger numbers (Associative Property). ضرب أكبر عاملين (خاصية التجميع).
- 2 Estimate the product. تقدير ناتج حاصل الضرب.

$$(3 \times 4) \times 2 = 12 \times 2 \quad \left\{ \begin{array}{l} 10 \times 2 = 20 \leftarrow \text{Estimate} \\ 12 \times 2 = 24 \leftarrow \text{Actual Product} \end{array} \right.$$

The Relationship Between Multiplication and Division

العلاقة بين الضرب والقسمة

Ex.

Muhammad has 15 oranges.

He wants to divide them equally among 3 plates.

How many oranges should be on each plate?

Answer: To get the number of oranges on each plate,
divide the total number of oranges into three groups.

The number of oranges on each plate = $15 \div 3 = 5$

Because $5 \times 3 = 15$, $3 \times 5 = 15$

Perimeter of a Square and a Rectangle

محيط المربع والمستطيل

6

Remember

Rectangle

Each two opposite sides are equal and parallel.

كل ضلعين متقابلين متساويان ومتوازيان.

Square

Each two opposite sides are parallel and all sides are equal.

كل ضلعين متقابلين متوازيين وكل الأضلاع متساوية.

The Perimeter of Any Polygon

- Perimeter = $5 + 4 + 2 + 3 + 2 = 16$ cm.

The perimeter of any polygon equals the **sum** of its side lengths.

محيط أي مضلع هو مجموع أطوال أضلاعه.

1 Find the **perimeter** of each of the following:

Perimeter

$$= \text{side 1} + \text{side 2} + \text{side 3} + \text{side 4} = \text{cm.}$$

Perimeter

$$= \text{side 1} + \text{side 2} + \text{side 3} + \text{side 4} = \text{cm.}$$

Perimeter of the Square محيط المربع

Ex.

- Perimeter of the square = Sum of its side lengths
 $= 6 + 6 + 6 + 6 = 24 \text{ cm.}$

محيط المربع = مجموع أطوال أضلاعه

or

- Perimeter of the square = Side length $\times 4 = 6 \times 4 = 24 \text{ cm.}$

محيط المربع = طول الصلع $\times 4$ 

2 Find the perimeter of each of the following squares:

a

$$\begin{aligned} \text{Perimeter} &= \text{Side length} \times 4 \\ &= \quad \times 4 = \quad \text{cm.} \end{aligned}$$

b

$$\begin{aligned} \text{Perimeter} &= \text{Side length} \times 4 \\ &= \quad \times 4 = \quad \text{cm.} \end{aligned}$$

c

$$\begin{aligned} \text{Perimeter} &= \text{Side length} \times 4 \\ &= \quad \times 4 = \quad \text{cm.} \end{aligned}$$

d

$$\begin{aligned} \text{Perimeter} &= \text{Side length} \times 4 \\ &= \quad \times 4 = \quad \text{cm.} \end{aligned}$$

Note:

Perimeter of the square = side \times 4

Side length of the square = Perimeter \div 4

Ex. Find the side length of each of the following squares:

- Perimeter = 28 cm.
- Side length = $28 \div 4 = 7$ cm.

3 Find the side length of each of the following squares:

a

Perimeter = 20 cm.

Side length = \div = cm.

b

Perimeter = 32 cm.

Side length = \div = cm.

Perimeter of the Rectangle

محيط المستطيل

Ex.

- Perimeter of the rectangle
= Sum of its side lengths
= $7 + 5 + 7 + 5 = 24$ cm.

محيط المستطيل =
مجموع أطوال أضلاعه

or

- Perimeter of the rectangle = (Length + Width) \times 2
= $(7 + 5) \times 2 = 12 \times 2$
= 24 cm.

محيط المستطيل

$2 \times (\text{الطول} + \text{العرض})$

4 Find the **perimeter** of each of the following rectangles:

a

Perimeter = (Length + Width) \times 2
 = (8 + 4) \times 2
 = 12 \times 2
 = 24 cm.

b

Perimeter = (Length + Width) \times 2
 = (6 + 5) \times 2
 = 11 \times 2
 = 22 cm.

c

Perimeter = (Length + Width) \times 2
 = (5 + 3) \times 2
 = 8 \times 2
 = 16 cm.

d

Perimeter = (Length + Width) \times 2
 = (7 + 6) \times 2
 = 13 \times 2
 = 26 cm.

Note:

- **Length of the rectangle** = Half the perimeter - Width
- **Width of the rectangle** = Half the perimeter - Length

Remember: Half the perimeter of the rectangle = (Length + Width)

5 Find the **length** of each of the following rectangles:

a Perimeter = 20 cm.

Length + Width = $20 \div 2$ = 10 cm.

Length = 10 - 4 = 6 cm.

Perimeter of a Square and a Rectangle

- b Perimeter = 28 cm.

$$\text{Length} + \text{Width} = \dots \div 2 = \dots \text{ cm.}$$

$$\text{Length} = \dots - \dots = \dots \text{ cm.}$$

- 6 Find the **width** of each of the following rectangles:

- a Perimeter = 30 cm.

$$\text{Length} + \text{Width} = \dots \div 2 = \dots \text{ cm.}$$

$$\text{Width} = \dots - \dots = \dots \text{ cm.}$$

- b Perimeter = 16 cm.

$$\text{Length} + \text{Width} = \dots \div 2 = \dots \text{ cm.}$$

$$\text{Width} = \dots - \dots = \dots \text{ cm.}$$

Detecting and Correcting Errors

Ex. Problem:

Hashem's family went on a three-day road trip. On the first day, they drove 350 kilometers. On the second day, they drove 213 kilometers. On the third day, they drove 124 kilometers. Last year on their road trip, they drove a total of 432 kilometers. How many more kilometers did they drive on this year's trip?

Hashem's family drove on this year's road trip $350 + 213 + 124 = 687$ km.
 Hashem's family drove in all road trips $= 687 + 432 = 1\,119$ km

What did the student do wrong?

Adding. $687 + 432$

Correct Answer:

The difference between the two trips $= 687 - 432 = 255$ km.

Steps to Represent Fractions on a Number Line

خطوات تمثيل الكسور على خط الأعداد

Ex. Represent fourths on the number line:

1

Draw a line.

Mark 0 on the left and mark 1 on the right, the space from 0 to 1 represents 1 whole.

ارسم خطاً، ثم ضع 0 على اليسار و 1 على اليمين، والمسافة من 0 إلى 1 تمثل 1 صحيحاً.

2

Divide the one whole into equal parts according to the denominator.

قسم الواحد الصحيح إلى أجزاء متساوية طبقاً للمقام.

3

You get a number line divided into 4 equal parts, each part is $\frac{1}{4}$.

تحصل على خط الأعداد مقسماً فيه الواحد اصبحت إلى 4 أجزاء متساوية لكل جزء هو $\frac{1}{4}$.

Notes:

$$0 = \frac{0}{4}$$

$$1 = \frac{4}{4}$$

Ex. Represent sixths on the number line:

1 Use the number lines to represent the following:

a Halves

b Thirds

c Fifths

2 Write the fraction shown on the number line:

3 Represent each of the following fractions on a number line:

4 At a park, there is a straight 1-kilometer path. Every $\frac{1}{6}$ of the path, there is a drinking fountain. Use the number line to identify where each drinking fountain is located.

- 5 Ali needs to wrap some presents. He lays the ribbon flat and says, "If I make 3 equally spaced cuts, I will have just enough pieces. I can use 1 piece for each present".

Use the number line to show Ali's ribbon and the cuts he will make.

- 6 Complete the following table, as in the example:

	Fraction	Divided	Represented on the Number Line
Ex.	$\frac{3}{4}$		
a	$\frac{2}{6}$		
b	$\frac{1}{3}$		
c	$\frac{4}{7}$

We get equivalent fractions if we multiply or divide both the numerator and the denominator by the same number. (Except for zero)

نحصل على الكسور المتكافئة عندما نقوم بقسمة أو ضرب البسط والمقام بنفس العدد أو على نفس العدد ما عدا الصفر.

Lesson Story Problems on Perimeter and Area

مسائل كلامية على المحيط والمساحة

(1) Rectangle

Ex.

There is a rectangular room, 5 meters long and 3 meters wide. Model it, then find its **perimeter** and **area**.

First Solution Method

Perimeter

The rectangle has 4 sides, each **two opposite sides** are **equal** in length. So, the perimeter = $5 + 3 + 5 + 3 = 16$ meters.

Area

The rectangle can be divided into **units**.
Area = **15** square meters.

Second Solution Method

Perimeter

Using the following rule:
Perimeter = (Length + Width) X 2
= $(5 + 3) \times 2 = 8 \times 2 = 16$ meters.

Area

Using the following rule:
Area = Length X Width = $5 \times 3 = 15$ square meters.

1 Complete the following table:

	Length	Width	Perimeter of the Rectangle	Area of the Rectangle
a	7 cm	5 cm	$(\quad + \quad) \times \quad = \quad \text{cm}$	$\times \quad = \quad \text{square cm.}$
b	6 cm	3 cm	$(\quad + \quad) \times \quad = \quad \text{cm.}$	$\times \quad = \quad \text{square cm.}$
c	8 cm	4 cm	$(\quad + \quad) \times \quad = \quad \text{cm}$	$\times \quad = \quad \text{square cm.}$

(2) Square
Ex.

A square-shaped room has a side length of 6 meters
Model it, then find its **perimeter** and **area**.

Perimeter

The square has 4 sides, and
all sides are equal in length.

$$\text{Perimeter} = 6 + 6 + 6 + 6 = 24 \text{ meters.}$$

Area

The square can be divided into equal
square units.

$$\text{Area} = 36 \text{ square meters}$$

Side length = 6 meters

Perimeter

Using the following rule:

$$\begin{aligned} \text{Perimeter} &= \text{Side Length} \times 4 \\ &= 6 \times 4 = 24 \text{ meters.} \end{aligned}$$

Side length = 6 meters

Area

Using the following rule:

$$\begin{aligned} \text{Area} &= \text{Side Length} \times \text{Side Length} \\ &= 6 \times 6 = 36 \text{ square meters.} \end{aligned}$$

First Solution Method

Second Solution Method

2 Complete the following table:

	Side Length	Perimeter of the Square	Area of the Square
a	2 cm	X = cm.	X = square cm.
b	7 cm	X = cm.	X = square cm.
c	9 cm	X = cm.	X = square cm.

The Relationship Between the Perimeter & Area

(I) Rectangle

Area = Length X Width **Length** = Area ÷ Width **Width** = Area ÷ Length

Area

Length = Area ÷ Width

Perimeter = (Length + Width) X 2

Width = Area ÷ Length

Ex.

A rectangular piece of land has an area of 48 square meters and a width of 6 meters. Find its length and perimeter

Answer: Length = Area ÷ Width = $48 \div 6 = 8$ meters.

Perimeter = (Length + Width) X 2 = $(8 + 6) \times 2$
 $= 14 \times 2 = 28$ meters.

1 Complete the following table:

	Area of the Rectangle	Length	Width	Perimeter of the Rectangle
a	30 square cm	10 cm	cm	(+) X = cm.
b	35 square cm	cm	5 cm	(+) X = cm.

- 3 The area of a rectangle is 21 square cm, and its width is 7 cm. Find the length of the rectangle and its perimeter.

(2) Square

Area

To find the side length, we are thinking of two numbers that are the same; the product of both is the area.

Perimeter =
Side Length \times 4

Ex.

The area of a square is 36 square cm. Find its perimeter.

Answer: $36 = 6 \times 6$. So, the side length = 6 cm.

Perimeter = Side Length \times 4

= $6 \times 4 = 24$ centimeters.
